New Bonding Tool Package

January 16, 2008

New and improved bonding tool package becomes standard in 2008

Beginning in 2008, Orthodyne Electronics is introducing a new standard for the bonding tool package, featuring a **BLUE** tool cap with a stronger grip and an OE logo. The cap design has been made stronger to minimize the occurrence of loose tools found in shipping.

A new standard label displaying integrated tool and lot information is being introduced as well, featuring the tool part number and a three-digit lot number, both alphabetically and in a bar code format. The bar code format adheres to the Code 128 standard with Check Sum enabled.

The transition to the new package is taking place gradually as remaining quantities of the tools in the old red caps are still available. Until the rest of the tools in the red caps are completely consumed, you may observe a mix of packages (both red and blue) in the shipments you are receiving.
